1.9 COMPARABILITY

In principle, a comparison or assessment of the environmental impacts of different products is only possible if they have been prepared in accordance with EN 15804+A2. For the evaluation of the comparability, the following aspects have to be considered in particular: PCR used, functional or declared unit, geographical reference, the definition of the system boundary, declared modules, data selection (primary or secondary data, background database, data quality), scenarios used for use and disposal phases, and the life cycle inventory (data collection, calculation methods, allocations, validity period). PCRs and general program instructions of different EPD program operators may differ. Comparability needs to be evaluated. For further guidance, see EN 15804+A2 (5.3 Comparability of EPD for construction products) and ISO 14025 (6.7.2 Requirements for comparability).

2.2 APPLICATION (INTENDED USE OF THE PRODUCT)

Silka kalkzandsteen elementen worden gebruikt in dragende en niet-dragende binnenwanden en binnenspouwbladen welke naderhand worden afgewerkt.

2.3 DESCRIPTION PRODUCTION PROCESS

Kalkzandsteen wordt geproduceerd uit zand, ongebluste kalk, water en toeslagmaterialen. Het zand en kalk wordt in de juiste verhouding gemengd met water en naar een reactor geleid waar de kalk wordt geblust. Vanuit deze reactor gaat het mengsel naar de pers waar het wordt samengeperst in de gewenste vorm. Vervolgens worden de producten op karren de autoclaaf ingereden. De autoclaaf wordt met behulp van stoom onder hoge druk en temperatuur gebracht. Dit initieert een chemische reactie waardoor kalkzandsteen verhardt. Na verharding worden de producten op pallets opgeslagen. Een deel van de productie wordt specifiek voor een project verzaagd. Vervolgens wordt een bouw pakket samengesteld en getransporteerd naar de afnemer. De elementen worden getransporteerd op een pallet. Het productieafval wordt zo nodig gebroken en opnieuw gebruikt in de productie van kalkzandsteen blokken en elementen.

2.4 CONSTRUCTION DESCRIPTION

Silka kalkzandsteen elementen worden met een kraan op de bouwlaag in de constructie gehesen. Het plaatsen van een elementenwand wordt uitgevoerd door twee personen, waarbij één persoon de lijmkraan bedient. Voor het lijmen wordt een kimstrook in cementbed met een troffel op waterpas geëgaliseerd. Vervolgens worden de elementen

2 Product

op de kimstrook gelijmd met behulp van een lijmbak en eventueel een lijmschep. Voor het lijmen wordt Silkafix lijmmortel gebruikt.

Het gemiddelde energieverbruik van de hijskranen is berekend op basis van de verstrekte informatie.

Uit de rittenregistratie van Xella Nederland BV blijkt dat in 2021 de gemiddelde transportafstand van productielocatie Hazelaar naar de aangeleverde bouwlocaties 113 km

is. Deze gemiddelde transportafstand is meegenomen in de LCA-berekeningen van de kalkzandsteen elementen.

Uit de rittenregistratie is ook gebleken dat in 2021 0,87% van de elementen terugkomt van de bouwlocaties. Dit percentage bouwafval is meegenomen in de LCA-berekeningen van de kalkzandsteen elementen.

Disclaimer 1 – This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

Disclaimer 2 – The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.

3.4 ENVIRONMENTAL COST INDICATOR NL PER SQUARE METER

Using the environmental cost indicator (ECI) method, which is presented in the NMD Determination Method (2020), the results are aggregated to the single-point score. The ECI is a relevant valuation method, especially in the Dutch construction sector. In the Netherlands, it is a prerequisite for public tenders. The aim of the indicator is to show the shadow price for environmental impacts of a product or project. The application of single-point scores is an additional assessment tool for eco-balance results. However, it must be pointed out that weightings are always based on a value maintenance and not on a scientific basis (EN 14040). The ECI results are shown in the following table.

Module EN15804	ECI NL	Share in total (%)
A1 Raw Materials Supply	€ 0.91	54,1 %
A2 Transport	€ 0.06	3,4 %
A3 Manufacturing	€ 0.36	21,2 %
A4 Transport from the gate to the site	€ 0.37	22,0 %
A5 Construction - Installation process	€ 0.15	9,1 %
B1 Use	€ -0.35	-20,7 %
B2 Maintenance	€ 0.00	0,0 %
B3 Repair	€ 0.00	0,0 %
C1 De-construction / demolition	€ 0.15	8,6 %
C2 Transport	€ 0.12	7,0 %
C3 Waste processing	€ 0.02	1,4 %
C4 Disposal	€ 0.00	0,1 %
D Benefits and loads beyond the product system boundary	€ -0.11	-6,4 %
ECI NL per functional unit	€ 1.68
